

Falco

Problem Statement

- The **fast growth of online ordering** has increased the demand for delivery labour by a factor of ten.
- A drone that can be used to **deliver parcel to your doorsteps**
- The drone should be able to **avoid any collision** such as trees, buildings, other UAVs or sign boards.

Features

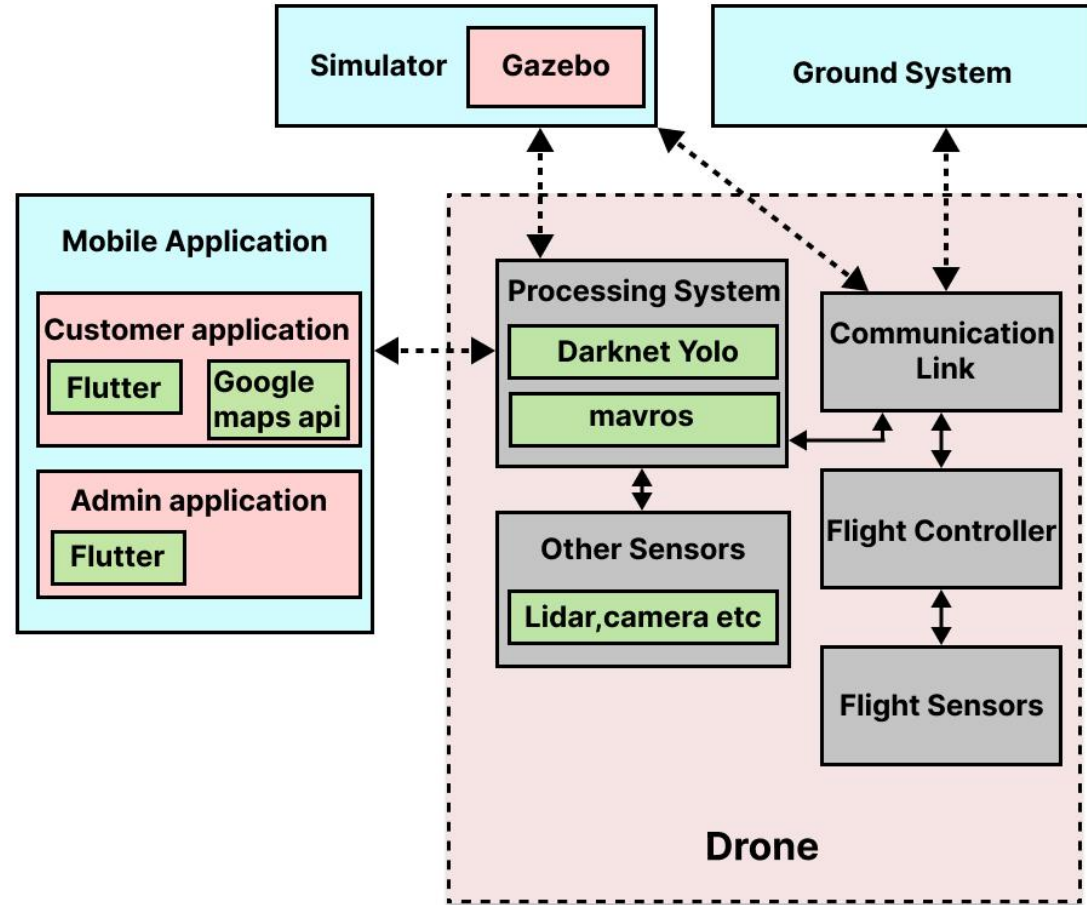

Our Solution

- Falco promises a fast delivery of your parcels without any hitches to the customer.
- Controller can log onto the app that was created using Flutter.
- They can see the drones that are available and nearby.
- After choosing one, track the location through the app.
- The Drone can detect and avoid obstacles.
